

At DAF, safety is our number one priority. So every model and every truck we produce for the EU will fully comply with the EU's General Safety Regulations (GSR) 1. GSR aims to halve the number of fatal road accidents and serious injuries by 2030, and eliminate them completely by 2050.

- DAF Side & Turn Assist
- Drive-off Assist
- Controlled steering column Deformation System (CoDeS)
- DAF Drowsiness Detection
- Alcohol Interlock Preparation
- Event Data Recorder
- Speed Limit Recognition
- Rear View Camera
- Full LED Lighting
- Predictive Cruise Control
- DAF Digital Vision System
- DAF Corner View
- Adaptive Cruise Control
- DAF Distraction Detection
- Programmed Cab Displacement System
- Forward Collision Warning
- Advanced Emergency Braking System
- Lane Departure Warning System
- Tyre Pressure Monitoring System
- Low Speed Trailer Brake

DAF Services

PACCAR CONNECT
Our connected services give you the best possible control of your business processes. From deep, real-time insights into your fleet performance to tailored on-road navigation for drivers. Accessed through the PACCAR Connect Portal, all connected services are available 24/7/365. Helping you increase uptime of your vehicles, reduce operational costs and optimise logistical efficiency.

DAF MULTISUPPORT
With technology evolving constantly, the service and maintenance of trucks require specialist support. With DAF qualified technicians and premium parts, we ensure your trucks spend the least amount of time in the workshop and the most amount of time on the road. All DAF vehicles come with the recommended option of a DAF MultiSupport Full Care service plan. So your fleet stays in top condition, achieving maximum uptime.

PACCAR FINANCIAL
As DAF's in-house finance provider, PACCAR Financial provides tailored and complete financial services to the transport sector. A unique understanding of your day-to-day business makes PACCAR Financial your partner of choice.

PACCAR POWER SOLUTIONS
Provides charging infrastructure and energy solutions for heavy duty electric trucks. The products and services portfolio covers turnkey solutions and service packages for depot charging and destination charging. All solutions offered are brand agnostic.

DAF DRIVER ACADEMY
DAF Driver Training helps drivers to improve their performance in terms of safe and efficient driving. The DAF Academy also provides specific training covering charging, range, regenerative braking and other key points when driving an electric truck. All of which helps your drivers feel valued members of your team.

DAF INTERNATIONAL TRUCK SERVICE (ITS)
Fast, professional help is available 24/7 on the road, throughout Europe. Call +31 40 21 43000 to speak directly to an ITS operator.

DAF DEALER NETWORK
A DAF dealer is never far away. Throughout Europe, our customers can count on around 1,000 DAF dealers and sales & service points for tailored advice and impeccable service.

DAF TRANSPORT EFFICIENCY
DAF Transport Efficiency (DTE) is our philosophy to help customers optimise their earnings per kilometre. Built around three key stones - Uptime, Efficiency, and Driver Comfort - DTE ensures maximum vehicle availability, optimal performance, and support for driver excellence.

DTE DAF TRANSPORT EFFICIENCY

The power of safety

HQ-EN-1026

A PACCAR COMPANY DRIVEN BY QUALITY

Far ahead in safety

Best-in-class direct vision

The award-winning New Generation DAF trucks set a new standard in safety for drivers, co-drivers and other (often vulnerable) road users. It starts with optimum direct vision. Panoramic windows and the unique, ultra-low vision dashboard (for the lowest possible window line) result in an amazing depth of view. The large kerb view window in the optional vision door and fold-up co-driver seat extend that view even further, making the New Generation DAF trucks best-in-class for direct vision.

Enhanced direct and indirect view

For an optimum indirect view, the DAF Digital Vision System offers a cutting-edge concept that replaces the main and wide-angle mirrors completely with retractable cameras. Mounted high on the cab, the DAF Digital Vision System provides a perfect view in all weather conditions, using ergonomically positioned monitors. The DAF XD, XF, XG and XG+ come as standard with the DAF Digital Vision System.

Direct vision is also guaranteed by the optional superb-quality side mirrors that perfectly balance vision, aerodynamics, styling and noise. Their smart, lean mirror housing increases direct view and minimises blind spots. And adding the DAF Corner View camera further enhances visibility on the front and co-driver side, helping to reduce blind spots even more.

Finally, with a robust cab structure, class-leading ergonomics and smart features to make driving safer (hands on the wheel, eyes on the road!), our New Generation trucks make DAF the industry leader when it comes to safety.

Smart active safety

To prevent or reduce the severity of accidents, the New Generation DAF trucks are fitted with a range of Advanced Driver Assistance Systems (ADAS). Many of these maximise active safety by helping the driver to manage steering and braking effectively. These include: Forward Collision Warning, Lane Departure Warning System, Emergency Brake Lights, DAF Side & Turn Assist and DAF's Advanced Emergency Braking System. Other features are the DAF Electronic Park Brake for smart park brake control, a Low Speed Trailer Brake for safe trailer coupling and uncoupling, and Park Brake Assist for additional park braking power, which helps out in a multitude of situations.

Passive safety

The New Generation DAF trucks also feature a full range of passive safety features, designed to protect the occupants and other road users in the event of a crash. The highly robust cab structure is the strongest on the market, offering protection from all sides and incorporating unique energy-absorbing crash boxes in the bulkhead and integrated crash zones at the rear.

Our Programmed Cab Displacement System (ProCaDis) prevents cabs from detaching, maximising the survival space for occupants. While our Controlled steering column Deformation System (CoDeS) reduces the impact of rear-end trailer collisions on the driver's chest.

Advanced Driver Assistant Systems

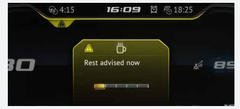

New Generation DAF trucks already comply with the EU's General Safety Regulations 1 using the systems described below.

Drive-off Assist
The purpose of Drive-off Assist is to help the driver detect vulnerable road users (such as cyclists and pedestrians) in front of the vehicle. The system is active both at standstill and at speeds below 10 km/h (when driving off). The driver receives visual information and audible warnings to alert the driver that it's time to brake. Drive-off Assist is a permanent feature and cannot be switched off.

Advanced Emergency Braking System (AEBS)
The emergency braking functionalities of the safety systems Forward Collision Warning and Advanced Emergency Braking System have been improved to also react to road users in front of the vehicle, like cyclists and crossing pedestrians. AEBS is active at vehicle speeds above 10 km/h for vulnerable road users and 15 km/h for vehicles.

DAF Drowsiness Detection
This active safety feature assesses driver alertness and warns the driver when a break is deemed necessary. A visual notification is shown when the driver starts to become drowsy, followed by an audible warning should the driver become increasingly drowsy. It cannot be switched off!

DAF Side & Turn Assist
Turn Assist detects road users on the co-driver's side and informs the driver visually via a light in the co-driver's A-pillar. Warnings are also shown in the instrument panel and, if specified, displayed on the DAF Digital Vision System. If a collision is imminent, audible warnings will also sound. Turn Assist is active at vehicle speeds below 30 km/h. Side Assist informs the driver of other road users in the adjacent lane (co-driver's side) when moving at any speed above 0 km/h. Like Turn Assist, it warns if a collision is imminent.

Speed Limit Recognition
This active safety feature keeps the driver informed of the local speed limits by recognising maximum permitted limits from traffic signs (through the front dual-lens camera) and from (map-based) data sources. The detected speed limit is visible on the instrument panel at all times. If the vehicle exceeds the speed limit, the driver is notified via both visual and audible warnings. The audible warning can be switched off by the driver.

Rear View Camera
The Rear View Camera helps the driver avoid collisions when reversing. It is activated automatically when reverse gear is engaged and will display video from the camera on the additional display in the cab. The camera is mounted on the rear of the rigid truck or tractor unit.

Alcohol Interlock Preparation
An alcohol interlock preparation is installed in all New Generation DAF trucks, including the standardised interface and connection. The control unit blocks the starter if the detected alcohol value is above a set limit. Engine start is possible to use cab climate control if the parking brake is applied.

Event Data Recorder (EDR)
The Event Data Recorder is the vehicle's black box. It stores footage from up to five incidents and is triggered by a forward collision warning (partial braking), an AEBS emergency braking event, or whenever the time to collision with a vehicle or vulnerable road user is below 0.5 seconds. Data can be downloaded by your DAF dealer using DAVIE.

Tyre Pressure Monitoring System (TPMS)
TPMS continuously monitors the pressure and temperature of the tyres to help prevent tyre blowouts due to low pressure or high temperature. The information is displayed on the driver's Digital Information Panel in the cab. The use of TPMS also helps to optimise tyre life and fuel economy. Sensors mounted inside the wheels measure the data and compare it to programmed reference values.

DAF Distraction Detection
DAF Distraction Detection uses advanced sensors to monitor driver attention and detect signs of distraction. Visual and audible alerts help the driver stay focused on the road, enhancing safety and reducing the risk of accidents caused by inattention.
